Knight Diver, Inc.

New Swimming Pool - Edgewood, MD

Polt Design Group was selected to provide space planning and full architectural services to add a 9,000 square foot Olympic size swimming pool to an existing scuba training facility.

The structure needed ample amenities for both swimmers and teams to train for competition as well as recreational use by the general public. Polt Design Group was recommended to Knight Diver by a former client. Our satisfied clients are our best resource for continued business! The proposed project included the use of a metal building for budgeting reasons and ease of year-round construction methods.

The pool houses support offices, a snack room, locker rooms, showers and dressing areas, spectator viewing spaces and a state-of-the-art pool filtration and HVAC equipment room. The building addition ties into the existing facility to allow staff to work both the smaller deep scuba training pool as well as the new swimming pool. The pool area has a sophisticated de-humidification system to reduce the high levels of humidity in the air to facilitate spectator comfort.

The project was finished on time with an accelerated schedule and within budget, and was completed in 2000.
