Kreiner Dental Clinic

Addition & Renovation - Bel Air, MD

The project consisted of retrofitting an existing residence with an office overlay into a state-of-the-art dental office, complete with four (4) new operatories, waiting space, offices, toilets, clerical area, and laboratory.

The site also required a new drive, handicapped parking and landscape to compliment the new addition/renovation. Care was taken to blend the new addition in with the existing structure to meet local covenant requirements.

The new operatories are linked with a state-of-the-art telecommunication system capable of accessing patient's files in any given location including the offices, lab, and each of the operatory locations.

Patients are also able to observe their own dental situations on a live TV screen situated at the proper location for viewing. A camera on the end of a wand is placed near the tooth or cavity in question at any given time and a magnified image is produced on the TV screen for the Doctor and patient to observe and discuss.
